

SURGICAL RUB

Made in Australia

SKINMAN 90

Antiseptic alcohol rub for surgical hand disinfection

ARTG 195543

Skinman 90 contains 90% w/w Ethanol in a water clear solution and is an antiseptic hand rub for surgical hand disinfection. **Skinman 90** meets TGA and European guidelines for use as both a pre-surgical hand rub and hygienic hand rub.

SURGICAL RUB

Skinman 90 is a TGA approved surgical rub with a 90 second application, only well designed alcohol based products achieve the superior performance threshold required by EN 12791 which ensures the highest efficacy first time every time, compared with the cumulative efficacy model used by FDA.

Skinman 90 achieves > 2 log (99%) reduction in resident skin flora on initial 90 second application as per EN12791.

Skinman 90 provides sustained microbial reduction under gloves for a period of 3 hours as per EN12791.

Skinman 90 achieves a > 5 log reduction in transient flora following an initial 20 second application when tested in-vivo as per EN1500.

Current WHO and ACORN guidelines recommend the use of alcohol based formulations for pre-operative hand preparation given their superior antimicrobial efficacy.

Reduced application time - A 90 second rub with **Skinman 90** complies with the requirements of EN12791. In addition, no rinsing with water is required and no drying of hands is required as the alcohol air dries.

Improved skin compatibility - Alcohol preparations have clearly demonstrated superior skin compatibility, where as Aqueous based (Povidone-Iodine & Chlorhexidine) solutions are known to be associated with skin irritation.

Skinman 90 offers a waterless, brush free scrub free which reduces skin abrasions and lowers risk of infectivity with minimal skin reactions on sensitive skins.

Skinman 90 supports environmental management initiatives: eliminating the need for scrubbing brushes, rinsing with water or drying hands post application with sterile towel as the alcohol air dries.

DIRECTIONS FOR USE

For surgical hand disinfection

- ▲ Hands must be free from visible soil and thoroughly dry before commencing the surgical hand rub.
- ▲ Surgical hand disinfection is achieved by rubbing undiluted product onto both hands as necessary to keep wet for 90 seconds
- ▲ At completion of rub allow hands to air dry thoroughly before donning sterile gloves.
- ▲ Refer to ACORN guidelines and the **Skinman 90** procedure chart for detailed protocol.

For hygienic hand disinfection

- ▲ Apply sufficient product to ensure complete coverage of hands
- ▲ Rub thoroughly into hands for 30 seconds ensuring all areas are covered until dry.

SAFETY INFORMATION

Do not mix with any other products. For further information and safety instructions see product label and Safety Data Sheet.
